

Homeopathic Medicine for Covid19 like symptoms according to Dr Shyamji Rai

Sr No	COVID19 SYMPTOMS AS PER World Health Organization.	CARBO VEG-Homeopathic Medicine for Covid19 like symptoms
1	Fever	<p>The fever is violent; it has a violent rigor or chill. Of course during the chill he is cold, but there is one strange feature, he wants cold water during the chill, and when the fever comes on he has no thirst. That is strange; it is uncommon. It is common for patients to be thirsty when they are hot with fever, and when cold not to ask for water. It is common not to ask for water during sweat. But in this patient you observe coldness, rigor, cold breath, and even in the chill sometimes a cold sweat, and you say that it is peculiar that he drinks so much cold water. It is strange; it is uncommon; rare. Hence it is one of the strong features of Carbo veg. febrile conditions.</p>

2	<p>Cold, Sore Throat, Dry Cough.</p> <p>Infection generally starts in the nose. Once inside the body, the coronavirus invades the epithelial cells that line and protect the respiratory tract, said Taubenberger, who heads the viral pathogenesis and evolution section of the National Institute of Allergy and Infectious Diseases in Bethesda, Maryland. If it's contained in the upper airway, it usually results in a less severe disease.</p> <p>But if the virus treks down the windpipe to the peripheral branches of the respiratory tree and lung tissue, it can</p>	<p>Cold - It will commence in the nose, with watery discharge, and he will sneeze, day and night. He suffers from the heat and is chilled by the cold; every draft chills him; and a warm room makes him sweat, and thus he suffers from both. He can find no comfortable place, and he goes on sneezing and blowing his nose. Perhaps he has bleeding from the nose. At night he is purplish. The coryza extends into the throat and brings on rawness and dryness in the mouth and throat. A copious watery discharge, filling the posterior nares and the throat. Then he begins to get hoarse, and in the evening he has a hoarse voice, with rawness in the larynx and throat. Rawness in the larynx on</p>

trigger a more severe phase of the disease. That's due to the pneumonia-causing damage inflicted directly by the virus plus secondary damage caused by the body's immune response to the infection.

As copies of the virus multiply, they burst out and infect neighboring cells. The symptoms often start in the back of the throat with a sore throat and a dry cough.

The virus then crawls progressively down the bronchial tubes. When the virus reaches the lungs, their mucous membranes become inflamed. That can damage the alveoli or lung sacs, and they

coughing; soreness to the touch. The more he coughs the worse the rawness becomes. This condition extends into the chest. Secretion of much thin mucus, finally becoming thick yellowish-green, and bad-tasting. Such is the coryza. Now, with it there comes a stomach disturbance that is commonly associated with Carbo veg. complaints. Great distension of the abdomen with gas. With this coryza he has belching, and sour, disordered stomach. Every time he disorders his stomach he is likely to get a coryza. Every time he goes into an overheated room he is likely to get a coryza, with sneezing, chest complaints, and catarrh.

have to work harder to carry out their function of supplying oxygen to the blood that circulates throughout our body and removing carbon dioxide from the blood so that it can be exhaled.

If one gets swelling there, it makes it that much more difficult for oxygen to swim across the mucous membrane. The swelling and the impaired flow of oxygen can cause those areas in the lungs to fill with fluid, pus and dead cells.

Pneumonia, an infection in the lung, can occur.

Some people have so much trouble breathing, they need to be put on a ventilator. In the worst cases, known as Acute Respiratory Distress Syndrome, the lungs fill with so much fluid that no amount of breathing support can help, and the patient dies.
